

VALENTINA GÓMEZ AGUDELO

Full Stack Developer
Blockchain Developer

ABOUT ME

I'm Valentina, originally a financial engineer who transitioned into the world of software development. Over the past two years, I've immersed myself into the web2, using technologies such as Next.js, GraphQL, ReactJS, and MongoDB, developing interactive functionalities for a website platform. My financial engineering background offers a distinct perspective, enabling me to merge analytical rigor with forward-thinking software solutions. With an eye on the future, I've taken steps into web3 and blockchain by attending the Polkadot Blockchain Academy, where I'm acquiring the essential skills to navigate this revolutionary domain. My combination of financial and web development background, and emerging blockchain knowledge positions me to contribute, innovate and craft solutions in this dynamic space.

EXPERIENCE

Software Engineer

TeamClass

Jun 2021 – Present
Remote

Automation and Optimization: Developing new functionalities that significantly automated processes for the operations team, enhancing efficiency and productivity.

Web Transition Management: Participating in the migration and update of our web platform, ensuring a smooth transition to newer versions without compromising user experience or functionality.

Database Management: Designed and implemented functions to modify the database, ensuring data integrity and enhancing system performance.

API Integration: Researching and consuming external APIs, integrating them into our platform to provide necessary functionalities.

Bug Support: Technical support to resolve software issues.

Developer Trainee

Tata Consultancy Services

Apr 2021 – Jun 2021
Remote

Engaged in a comprehensive learning program to acquire the necessary programming languages and tools for upcoming projects.

Applied knowledge through hands-on experience with internal mini-projects, reinforcing concepts gleaned from lectures to gain familiarity with languages such as Java, frameworks like Angular, and databases like SQL.

Internship

Tributi

Jan 2021 – Mar 2021
Remote

Engaged in defining the functionality of the Back-end and API.

Automated the extraction of data from spreadsheets, converting it into a valid SQL format, resulting in a time-saving of over 80%.

Assisted in the design and development of the webpage using React.
